

External PCI DSS Security Scan (ASV Scan)

Requirement 11.2.2

In order to verify their compliance with the PCI DSS, companies that process, store or transmit credit card data are required to have an external scan conducted on their IT systems on a quarterly basis to check for security vulnerabilities.

usd ASV Scans satisfy PCI DSS requirement 11.2.2 (quarterly external vulnerability scans). After successfully completing a scan, you will receive an Attestation of Scan Compliance and a detailed technical report via our PCI DSS Platform.

What distinguishes our scans?

Since 2005, usd has been authorized by the PCI Security Standards Council (PCI SSC) to perform security assessments according to the PCI DSS. As an Approved Scanning Vendor (ASV), we conduct ASV Scans for our clients worldwide. If our scan reveals findings that are relevant to the PCI DSS, we grant you an unlimited number of free Re-Scans until your scanning results are PCI DSS compliant. Our multi-language PCI Competence Center is happy to help with any questions you may have.

The PCI Security Standards Approved Scanning Vendor logo is a trademark or service mark of The PCI Security Standards Council in the United States and in other countries.

Prices

One-time scan	Annual package
for 1 IP address EUR 220.00*	4 scans for 1 IP address EUR 780.00*
+	+
for each additional IP address EUR 12.00*	4 scans for each additional IP address EUR 39.00*

Your Scanning Procedure

Registration

Register on the PCI DSS Platform and specify a time slot and the objectives of your scan. Find more information here:

<https://pci.usd.de/en/>

Planning

The ASV Scans are performed for each IP address. If you are not sure which IP addresses are in scope according to the PCI DSS, our experts at the PCI Competence Center are happy to help.

Scan

We check your internet-accessible IT systems for relevant security vulnerabilities and irregularities using a standardised, internationally recognised procedure. We do not exploit vulnerabilities we identify. The risk of disrupting normal operations of your IT systems is therefore reduced to almost zero.

Review

One of our Approved Scanning Vendor professionals reviews your scan results, evaluates any findings concerning compliance with the PCI DSS and provides you with recommendations on corrective actions. Afterwards you can comment on findings and report false positives.

Report

You receive a conclusive comprehensive report comprising an Executive Summary and a Technical Report. You additionally receive the Attestation of Scan Compliance required for verifying your compliance with the PCI DSS. The report evaluates the criticality level and risk of occurrence of each finding and gives recommendations on corrective actions.

Seal & Certificate

If your scan results prove compliance with the PCI DSS and you have completed your SAQ or successfully conducted an on-site audit according to PCI DSS requirements, you will receive your PCI DSS Compliance Seal and Certificate.
