

Internal PCI DSS Security Scan

Requirement 11.2.1.

IT system downtime jeopardises customer satisfaction in within minutes, harms the company's reputation within hours and threatens the company's existence within just a few days. This is one of the main reasons why the PCI Data Security Standard demands in requirement 11.2.1 that internal vulnerability scans be performed on a quarterly basis.

With internal Security Scans, you check your IT systems (servers, networks, web servers, online shops, etc.) for several thousands of known and continuously updated vulnerabilities. We use a standardised and internationally recognised scanning procedure. By default, the internal PCI DSS Security Scan is conducted remotely. Please do not hesitate to contact us if you would like to have it conducted on site.

What distinguishes our scan?

The internal Security Scans are performed for each IP address. Vulnerabilities discovered in this process are not exploited so that the risk of disrupting proper operations of your IT systems can be reduced to almost zero. You will receive the scan results in the form of a summary and an extensive technical report. This report contains all discovered security vulnerabilities and detailed recommendations on how to remediate them. Our experts are happy to assist you with any questions you might have.

usd AG – your accredited partner

Our global accreditation as an Approved Scanning Vendor in the credit card industry is both recognition and motivation for us to improve continuously. We have highest standards for our security analyses in terms of precision and quality.

Price

Annual package
4 scans for up to 5 IP addresses Euro 660.00*
+
each additional IP address Euro 30.00*

*The German statutory value-added tax must be added to all prices.

Your Scanning Procedure

Planning

During the planning phase, we determine the IP addresses of the IT systems you wish to scan and schedule a time window for the scan. On request, we also assist you in setting up a VPN tunnel.

Scan

We check your IT systems for relevant security vulnerabilities and irregularities using a standardised, internationally recognised procedure. The scan is conducted remotely. We do not exploit vulnerabilities we identify. The risk of disrupting normal operations of your IT systems is therefore reduced to almost zero.

Review

One of our IT security specialists reviews your scan results. We base our evaluations of vulnerabilities on international, renowned security standards.

Report

You receive a conclusive comprehensive report comprising an Executive Summary and an English-language Technical Report. This report evaluates the criticality level and risk of occurrence of each vulnerability and gives recommendations on corrective measures.

Information

The services are provided from the offices of usd AG via the internet. If internal IT systems and applications are checked, this is done via a secure, encrypted connection. On request, services can also be provided on site. We would be happy to provide you with an individual offer.
