

Web Application Security Scan

Recent studies have shown that a major part of successful cyber attacks exploit known vulnerabilities in web applications. Our vulnerability scan for web applications quickly and efficiently identifies potential points of attack hackers might strike.

What Distinguishes Our Scan?

With our Web Application Security Scans, you check your external (internet-accessible) and internal web applications for weak points and security vulnerabilities.

We base our analyses and evaluations of the findings on the guidelines by the Open Web Application Security Project (OWASP) and internationally renowned security standards.

Prices

One-time scan

1 scan for 1 web application
(1 URL with 1 port) and one user role

EUR 600.00*

Prices include one user role, therefore you can also test your web application "behind the login". For each additional user role, we charge EUR 200.00*. The price for a re-scan is EUR 400.00*. For setting up a VPN tunnel, we charge an additional flat fee of EUR 300.00*.

Would you like to scan more? We will be happy to offer you an individual discount!

*The German statutory value-added tax must be added to all prices.

** Web application = e.g. <https://www.example.de>

Your Scanning Procedure

Planning

During the planning phase, we determine the web application or the URL information of the web application you wish to scan as well as the form parameters required for a login. If required, we establish a VPN connection. We also schedule a time window for the scan.

Scan

We test your web application using a standardised, internationally recognised procedure. All public and, if available, non-public websites behind a login mask are taken into account. For this purpose you provide us with a test user (max. 1 role). In the first step, our scanner enumerates the various components of your application. You are welcome to support us by providing a complete sitemap so that we can guarantee the complete coverage of the application. Subsequently, our scanner performs the actual verification of the determined application parts. Detected weak points are not exploited. We do not exploit vulnerabilities we identify. The risk of disrupting normal operations of your IT systems is therefore nearly reduced to zero.

Review

One of our IT security specialists reviews your scan results. We base our evaluations of vulnerabilities on international, renowned security standards.

Report

You receive a conclusive comprehensive report comprising an Executive Summary and an English-language Technical Report. This report evaluates the criticality level and risk of occurrence of each vulnerability and gives recommendations on corrective measures.

Re-Scan

By request, we are happy to verify whether you properly corrected identified vulnerabilities by means of a re-scan. All initial finds will be checked for proper correction. Afterwards, you will receive an adjusted report.

Information

The services are provided from the offices of usd AG via the internet. If internal IT systems and applications are checked, this is done via a secure, encrypted connection. On request, services can also be provided on site. We would be happy to provide you with an individual offer.

Web Application Security Scan

Order via fax to +49 6102 8631-99 or via e-mail to sales@usd.de

I hereby order the following scanning package:

One-Time Scan Optional Re-Scan

for a number of _____ IP web applications. I wish the scan to be performed with a number of _____ user roles.

Salutation _____

First name / Last name _____

Email address _____

Phone _____

Company _____

Street address _____

Post code / State / Province _____

Country _____

Place, Date _____

Signature _____

Company stamp

The service will be invoiced upon placement of the order. The term of payment is 14 days from the date of invoice. Send us the order form and we will contact you to coordinate the scan with you. This product sheet will be valid until a new version is released.

Product sheet creation date 16/09/2020
